

Meryl Marasigan

Software Developer & Tester

Motivated and detail-oriented Software Engineer with a strong background in software development, software testing, and test automation. Skilled at ensuring high-quality software delivery through effective development, test planning, execution, and defect tracking.

Work Experience

Product Quality Analyst

Fox Corporation

August 2025 - Present

QA Engineer focused on software quality, test automation, and release validation across mobile, API, and customer-facing applications. Experienced in developing testing strategies, validating end-to-end functionality, managing test coverage, and supporting reliable software releases across multiple environments.

- Built and maintained automated mobile UI tests with CodeceptJS and Appium using POM and modular architecture
- Expanded automated API testing with CodeceptJS, Postman, and Proxyman, validating responses, payloads, session data, and cross-system behavior
- Validated end-to-end customer journeys and Salesforce live chat routing, including data integrity, queue mapping, and user-to-agent transfers

Software Developer (Pro-Bono)

Valyria Studios

February 2025 - August 2025

Software Developer focused on translating stakeholder needs into practical web applications and delivering reliable, user-focused solutions. Experienced in full-stack development, data management, real-time functionality, and iterative development based on client feedback, with an emphasis on code quality and validation.

- Built real-time vote ranking and responsive UI functionality for nonprofit fundraising events, iterating on features based on stakeholder feedback
- Built and validated SQL data flows and CSV export functionality, ensuring submitted votes were accurately stored, queried, and reported
- Conducted stakeholder interviews to gather business requirements and translated client needs into a working web voting platform using React, PostgreSQL, and Supabase

Software Test Engineer

Sciex

July 2022 - October 2024

Software Test Engineer focused on software quality, automation, and validation of integrated software and hardware systems. Experienced in developing testing solutions, validating complex workflows, collaborating across technical teams, and supporting reliable software delivery within regulated environments.

- Performed functional, integration, regression, and system testing of desktop driver software integrated with laboratory instrumentation; verified software commands produced expected hardware behavior, validated software-to-instrument communication, and investigated hardware-software failures in a regulated pharmaceutical environment
- Collaborated with Product, client-facing, and engineering teams to translate technical requirements and end-user workflows into comprehensive validation strategies, contributing to a 10% reduction in post-release defects
- Developed a proof-of-concept automated testing framework using Python and Selenium, establishing reusable test infrastructure for repeatable regression testing across software releases

Education

California State University, Northridge - 2025-2027

M.S. Software Engineering

Pursuing a Master's degree in Software Engineering with a focus on agile methodologies and software architecture.

- GPA: 3.9
- Relevant Coursework: Software Architecture, Agile Methodologies, Software Testing and Quality Assurance, Cloud Computing, DevOps Practices

University of California, Irvine - 2018-2022

B.S. Computer Science

- GPA: 3.65
- Relevant Coursework: Data Structures and Algorithms, Software Engineering, Database Systems, Web Development, Mobile App Development
